## (U) A. Mission Description

This is an FY03 NEW START. Beginning in FY03, C-130J program RDT&E funding will provide for: 1) the development, integration, and testing of International Civil Aviation Organization (ICAO) and Federal Aviation Administration (FAA)-mandated Global Air Traffic Management (GATM) and navigation safety (nav safety) capabilities for the C-130J weapon system; 2) the development, integration, and testing of aircraft modifications necessary to correct deficiencies identified in qualification and operational testing of this platform; and 3) the development, integration, and testing of C-130J enhancements identified by Air Mobility Command (AMC), which is the USAF lead operating command for the C-130J weapon system.

The C-130J is a medium-size transport aircraft capable of performing a variety of combat delivery (airlift) operations across a broad range of mission environments. As such, the aircraft must be capable of worldwide operations. The C-130J aircraft, in its present Block 5.3 configuration, is partially GATM/nav safety compliant. Capabilities provided in the Block 5.3 configuration include Required Navigation Performance (RNP)-10 (miles), RNP-5, Basic Area Navigation (BRNAV), Traffic Alert and Collision Avoidance System (TCAS) Version 7.0, FM immunity for Instrument Landing System (aka protected ILS), and the aircraft communications system software necessary to operate VHF communications radios with 8.33 MHz frequency seperation. During FY02, the C-130J will undergo flight testing to verify compliance with the Reduced Vertical Separation Minimum (RVSM) requirement. These RDT&E funds will enable development, integration, and testing of the remaining GATM/nav safety requirements needed on C-130J aircraft. These capabilities include RNP-4, RNP-1, Terrain Approach Warning System (TAWS), Selective Availability Anti-Spoofing Module (SAASM) Global Positioning System (GPS), Local Area Augmentation System (LAAS), Wide Area Augmentation System (WAAS), Mode Select (Mode S) Beacon Transponder System with data link capability, Automatic Dependent Surveillance-Address (ADS-A), Automatic Dependent Surveillance-Broadcast (ADS-B), satellite communications (SATCOM) voice and data link capability, high frequency data link (HFDL), Controller-Pilot Data Link Communications (CPDLC), and AMC Mobility 2000 (M2K) communications.

The current C-130J Operational Requirements Document (ORD), validated 17 Apr 99, identifies the GATM/nav safety requirements for the C-130J. Supplemental guidance for the various GATM/nav safety requirements is provided via numerous ICAO, FAA, and DOD standards. Where possible, the C-130J GATM/nav safety solution set will be common with other USAF/AMC weapon systems performing similar GATM/nav safety upgrades.

(U)	E. Acquisition Strategy  The C-130J weapon system will be modified using a 'block upgrade' strategy. The full GATM/nav safety requirement will be met in two phases Block 6.0, which will begin with FY03 RDT&E funding and continue with FY04 RDT&E funding, and Block 6.1, which will use FY05 and FY06 RDT&E funding to complete the total GATM/nav safety development effort. Block 6.2 will begin with FY07 RDT&E funding and incorporate additional C-130J improvements not included in prior block upgrades.										
	The proportion of GATM/nav safety requirements allocated to Blocks 6.0 and 6.1 will be determined via an on-going trade study being conducted by Lockheed Martin (the C-130J prime contractor). The results of this study will be available in May 2002. In addition to the GATM/nav safety requirements contained in Blocks 6.0 and 6.1, a to-be-determined number of aircraft deficiency reports (DRs) and product enhancements will be allocated to each block upgrade based on AMC's priorities for aircraft improvements.										
	Lockheed Martin will be the prime contractor for these efforts, perform the certification of each block upgrade, install production retrofit kits on USAF	_	-	d, following th	e successful co	onclusion of flight	testing and
